

Introducing... *Brick-Eze*

'the economical & environmentally friendly lightweight concrete common.'

About

Brick-Eze is a standard shape lightweight pressed brick made using sustainably sourced recycled products & Australian award winning technology. Brick-Eze is:

LIGHTWEIGHT...at least than 2kg, Brick-Eze is around 30% lighter than a standard clay brick.
Meets Australian Standard AS/NZS 4455.

ENVIRONMENTALLY FRIENDLY...manufactured using 85% sustainable recycled materials.

ECONOMICAL...cheaper than clay bricks plus significantly lower labour costs.

EASY TO USE...quick and easy to lay, can be cut with a standard hand saw - brickies love them!!!

Benefits

Lighter weight means increased productivity and lower labour costs.

Improved safety and OH&S outcomes.

Reduced 'dead load' in structure.

Lower energy consumption in production...significantly reduced carbon footprint.

Lower transportation costs...more products per load and reduced CO2 emissions during transportation.

Same mechanical properties as a standard brick...load bearing (subject to engineers' specifications).

High durability...general purpose grade, sulphate resistant.

Improved dimensional stability (less variation in size and shape of bricks)...results in more even laying of bricks and superior finish for rendering.
